FALL 1960, SPRING 1961

The spring '61 season will mark the end of our retail mail order business. We have made many friends through the mail and we are sorry to discontinue an enjoyable business.

The small size of our operation makes it impossible to maintain the necessary degree of efficiency in these times of increasing overhead costs, so we will devote full time to the wholesale trade.

Please use this folder for both fall and spring orders. If you lose your folder, we will be glad to send another.

WHEN YOUR PLANTS ARRIVE, unpack and plant at once. Do not expose roots to sun or air at any time. Do not plant too deeply! Never put a plant any deeper than it was in the nursery. Water thoroughly immediately after planting.

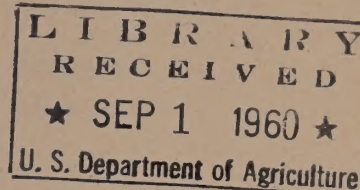

We pack with a minimum of moisture to prevent mold, so the roots may appear dry when you unpack. Dip the roots in water before planting if such is the case.

If for some reason you are unable to plant when the package arrives, unpack and "heel in" the plants in a shady place and water well. They will keep until you can plant properly. If you haven't time to unpack, place the parcel in a cool shady place and get at it as soon as you can.

SHIPPING DATES — Fall shipping begins in early to mid September for evergreens and azaleas, and about October 15 for deciduous shrubs and trees. We can ship until freezing weather, usually late November.

The spring season begins when the soil thaws, ordinarily late March, and continues through April and May.

You may designate a certain date and we will ship as near that time as possible, otherwise we will ship at proper time for your area.
